ALEXSEAL® Introduces Premium Yacht Cleaning Products

Soap & Sealer Products Designed to Clean & Protect Polyurethane Topcoats

Charleston, SC & Hamburg, Germany (January 25, 2017) - ALEXSEAL® Yacht Coatings has announced the launch of two new premium yacht cleaning products, designed specifically for marine use, and meeting all applicable environmental regulations. Available in conveniently sized packages for large and small applications, ALEXSEAL Premium Wash Down and Polymer Sealer were developed to provide additional beauty and prolonged life to the already industry-leading gloss and durability characteristics of ALEXSEAL topcoats.

Premium Wash Down Concentrate

ALEXSEAL Premium Wash Down Concentrate is a biodegradable washing detergent designed to clean ALEXSEAL topcoats. It is neutral in PH; does not include abrasives and is free rinsing which decreases drying time. ALEXSEAL Premium Wash Down Concentrate is formulated for the marine environment and meets all environmental requirements for marine detergents. Users of Premium Wash Down Concentrate will be able to achieve a professionally cleaned surface with minimal environmental impact.

Premium Polymer Sealer

ALEXSEAL Premium Polymer Sealer is a non-abrasive synthetic sealer designed for cleaning and protecting surfaces painted with polyurethane. It is formulated with UV absorbers that will help protect the paint from exposure to the sun and improve the coatings' life expectancy.

ALEXSEAL Premium Polymer Sealer will remove mild stains and water spots from the surface and leave behind a protective polymer coating which will help seal the surface from harsh elements of the marine environment. It is recommended to apply ALEXSEAL Premium Polymer Sealer every 3 to 4 months to areas that have extreme exposure to sunlight. Premium Polymer Sealer can be used to restore a new, radiant shine to a topcoat while eliminating weather-related graying.
