

ARMIT Company launches ARMIT Marine and announces breakthrough in IoT Monitoring Technology for the Internet of Marine Things.

Armit Marine and IoT Monitoring Sensors launched at the 2017 Newport International Boat Show

FOR IMMEDIATE RELEASE

SEPTEMBER 14, 2017

NEWPORT INTERNATIONAL BOAT SHOW (NIBS), NEWPORT, RI /newswire/ — Internet of Things (IoT) service provider ARMIT is formally launching ARMIT Marine to provide simple IoT-Monitoring solutions and a suite of battery powered wireless smart sensors that keep you informed and alert.

ARMIT MAX sensors are seamless, autonomous, IoT connected devices that will give boaters, fleet operators, and marinas simple solutions to monitor what matters most. Combining ARMIT wireless IoT technology with the ARMIT IoT network, ARMIT Marine offers instantly deployable solutions with security, connectivity and ARMIT IoT-Monitoring. ARMIT MAX sensors instantly enables boaters and marine service professionals across the globe to remotely, automatically and securely activate and monitor any 'thing'.

This innovative technology delivers several IoT breakthroughs. ARMIT MAX sensors or 'things' connect securely onto the global GSM network without the need for any physical configuration; power connections or network connection. ARMIT MAX sensors are monitored so when status for the sensor changes, the sensor alerts the network and the ARMIT IoT network sends acknowledgement back to the sensor. ARMIT MAX sensors use Cellular IoT Network connectivity and ship with ARMIT SIM Intelligent, which can be remotely provisioned to operate in most any country on earth.

ARMIT Marine will display the BILGEMAX NOTIFI at NIBS, a complete monitoring package for your boat or vessel. BILGEMAX NOTIFI will remotely monitor the water level in your boat bilge. If water level rises above desired level, the NOTIFI sensor immediately alerts the network and within seconds customers receive, email, text and voice alerts. BILGEMAX NOTIFI includes the ARMIT BILGEMAX Float with 5M of cable, mounting kit and a BILGEMAX NOTIFI sensor with mounting kit for \$199.99. Network connectivity and monitoring are \$69.99 / YEAR.

Mitchell Arthur, Founder | CEO at ARMIT, says: "This new technology will allow boaters a simple solution to monitor any boat left in water. The majority of boats that sink do so while tied up at the dock. BILGEMAX gives boaters a chance to hear their boat scream in the event of a water problem."

About Armit Company

Armit provides local-to-global IoT solutions backed by end-to-end reliability and security. We're powering the network that delivers the connectivity, data and management for any 'thing' connected. The network is the core of our business. And at Armit, our goal is delivering network solutions that empower the Internet of Things. Our flexible, network platform enables developers and 'thing' creators to quickly get to market with purpose-built IoT solutions. Just tell us what you need. We'll work with you to create the ideal combination of solutions and support to make it happen. For more information visit armit.co or email us at info@armit.co
